

# fabrication & value added

**Mercury Plastics is the one-stop source for all your plastic processing and fabrication needs.**

## One-Stop Plastics Processing and Fabrication

Mercury Plastics' comprehensive array of plastics processing and fabrication solutions makes your design job easier, simplifies project management and raises production efficiencies. Our engineering expertise, combined with our multi-faceted capabilities, offers you distinct advantages. First, broad single-source capability means fewer suppliers to manage and lower shipping and

overhead costs. You'll also enjoy minimized tooling and retooling costs and reduced pre-production and production lead times. Plus, subsequent engineering changes are more streamlined.

At Mercury Plastics, we approach each project with optimization in mind. Every job is carefully analyzed by our expert engineers to ensure the best possible design solution. Let us review your new or existing products for increased efficiency and cost savings. Our engineers are adept at combining our wide range of capabilities to deliver the very best design solution possible.

## Thermoplastics Fabrication Solutions

Mercury Plastics offers comprehensive fabrication and assembly services, including sonic welding, spin welding, hot plate welding, heat sealing, punching, sawing and drilling. This allows us to provide you with a finished component, not just pieces and components.

Our approach to thermoplastics fabrication goes beyond the conventional, offering you unique fabrication alternatives such as injection overmolding and precise, tight tolerance fabrication. Let us review your new or existing products for fabrication optimization and find out how you can reap the benefits of improved product quality and performance at a lower product cost.

## Array of Products and Services

Having grown to be one of the largest custom extrusion suppliers in North America and as an innovator and leader in the plastics industry; Mercury Plastics has the ability to handle all of your thermoplastic needs.

Whether your best solution includes forming, extrusions, Air-Core®, overmolding, cross-linking, fabrication or an assembly, Mercury Plastics engineers will help you take advantage of all of our capabilities to design the lowest total cost product. To learn more, please call us at 440-632-5281 or visit us on the web at [www.mercuryplastics.com](http://www.mercuryplastics.com).
